

# Security Assessment Report

\*\*Generated:\*\* 2026-02-13T08:03:38.051313Z

\*\*Scope:\*\* Uploaded Files Analysis

## Executive Summary

This security assessment identified 46 active vulnerability findings in Uploaded Files Analysis.

Severity Distribution:

- High Severity: 44 findings
- Medium Severity: 2 findings
- Low Severity: 0 findings

Findings include evidence-based detections with specific file locations and remediation suggestions. All findings should be reviewed by a security analyst for contextual risk assessment.

## Scope & Methodology

This assessment employed a deterministic rule-based scanning approach combined with AI-assisted analysis.

Detection Method:

- Pattern-based rule engine for vulnerability detection
- Evidence collection with exact file and line references
- Confidence scoring based on rule metadata and evidence completeness

Analysis Method:

- Local LLM (Ollama) for explanation and remediation suggestions
- Analyst review for final severity assessment
- Evidence-based validation of all findings

All findings include exact locations and evidence snippets for verification.

## Findings

### **VULN-001: Exposed administrative or database port**

\*\*Severity:\*\* Medium

\*\*Confidence:\*\* 0.55

\*\*Category:\*\* Network

Affected Files:

- `azure\_notes.csv`

Locations:

- `azure\_notes.csv`

Evidence:

Time,Host,Service,Port,Protocol,Type,Data  
2025-09-07 12:29:34 UTC,10.97.119.225,,,host.os.nmap\_fingerprint,:os\_vendor=>"Microsoft",

## Risk Overview

### Risk Overview

---

Total Active Findings: 46

High Severity (44 findings):

Requires immediate attention. These findings pose significant security risks

and should be remediated as a priority.

**Medium Severity (2 findings):**

Should be addressed in the near term. These findings indicate potential security concerns that should be evaluated in context.

**Low Severity (0 findings):**

May be addressed as resources permit. These findings represent lower-risk issues or hygiene improvements.
